

2026

LOCAL ENTERPRISE INTELLIGENCE PLATFORM

# The Private AI Layer for the Enterprise

Private AI for documents, operations, finance, contracts and legal intelligence — built to understand every document, make every decision traceable and keep every system local.

**JUSTITIA 2026**

# Table of Contents

From enterprise document intelligence to local legal reasoning, workflows, security and deployment.

|           |                                                     |       |

## THE PROPOSITION

# Not a legal chatbot. A local intelligence layer for the enterprise.

Justitia understands documents, connects operational evidence and delivers legal, financial, contractual and business reasoning with full traceability.

### Fully local

No cloud AI, no third-party document processing and no external exposure of sensitive company data.

### Evidence-first

Every answer links back to the exact document, page, clause, table, row, cell or email used.

### Multi-domain

Invoices, shipping receipts, contracts, vendors, emails, policies, legal sources and every operational record.

### Legal-grade reasoning

Jurisdictions, effective dates, legal hierarchy, internal documents, uncertainty and missing evidence are separated clearly.

Justitia turns the company document archive into a controlled operating memory.

**DOCUMENT UNIVERSE**

# One system for every document the company produces or receives.

Justitia is built for mixed, messy and sensitive enterprise environments: structured files, scanned archives, tables, correspondence, contracts and legal sources.

**Understood**

Text, tables, clauses, entities, dates, amounts and relationships.

**Connected**

Invoices to payments, contracts to vendors, shipments to orders, emails to decisions.

**Traceable**

Every response can show the source evidence behind the conclusion.

## FUNCTIONAL ARCHITECTURE

# Six operational domains. Twenty-five enterprise modules.

Each domain represents a business capability, not a technical feature group. The implementation scope is selected and tailored around the organisation.

01

## Document Intelligence & Knowledge

The foundation of Justitia: ingest, classify, search, cite and connect every document into a trusted enterprise memory.

02

## Finance & Invoice Operations

Control financial evidence by connecting invoices, payments, bank records, purchase orders, deliveries and reporting.

03

## Procurement, Vendors & Logistics

Understand the full supply chain document trail from vendor onboarding and purchasing to delivery and discrepancy review.

04

## Contracts & Obligations

Transform contracts, emails and operational documents into searchable clauses, responsibilities, deadlines and commitments.

05

## Legal & Compliance Intelligence

Deliver specialised multi-jurisdiction legal reasoning, compliance mapping, drafting and risk analysis with evidence behind every conclusion.

06

## Workflow, Security & Local AI Governance

Control how the platform operates: permissions, approval workflows, model administration, local infrastructure and auditability.

**OPERATIONAL DOMAIN 01**

# Document Intelligence & Knowledge

The foundation of Justitia: ingest, classify, search, cite and connect every document into a trusted enterprise memory.

**01**

## Universal Document Intake

Imports and prepares every company document - PDFs, scans, emails, spreadsheets, presentations, images and exports - without moving originals out of secure storage.

**02**

## Automatic Document Classification

Recognises document types such as invoices, contracts, delivery notes, receipts, policies, emails and vendor records, then organises them into usable families.

**03**

## Enterprise Search & Question Answering

Lets authorised users ask questions across departments and receive grounded answers from documents, tables, metadata and connected records.

**04**

## Evidence, Citations & Traceability

Links every conclusion to exact sources: pages, clauses, tables, spreadsheet cells, emails, attachments and document regions.

**05**

## Enterprise Knowledge Graph

Connects companies, vendors, invoices, contracts, payments, shipments, obligations, people and disputes into one navigable business memory.

**06**

## Document Families & Version Control

Connects originals, drafts, signed versions, amendments, credit notes, purchase orders, invoices, delivery notes and related correspondence.

**07**

## Enterprise Workspaces

Creates controlled spaces for audits, investigations, legal matters, vendor reviews, due diligence, contract negotiations and financial analysis.

**OPERATIONAL DOMAIN 02**

# Finance & Invoice Operations

Control financial evidence by connecting invoices, payments, bank records, purchase orders, deliveries and reporting.

**08**

## Invoice Intelligence

Extracts invoice data, detects duplicates, tracks due dates, links credit notes and supports invoice-to-payment, invoice-to-order and invoice-to-delivery review.

**13**

## Financial Document Reconciliation

Matches invoices, payments, bank statements, accounting records, contracts, purchase orders and deliveries with clear status reporting.

**17**

## Reporting & Analytics

Generates traceable operational reports: unpaid invoices, vendor spend, delivery performance, contract expirations, missing approvals and compliance gaps.

**OPERATIONAL DOMAIN 03**

# Procurement, Vendors & Logistics

Understand the full supply chain document trail from vendor onboarding and purchasing to delivery and discrepancy review.

**09**

## Purchase Order & Procurement Intelligence

Compares purchases, orders, invoices, quotations, approvals and contract prices to expose gaps, deviations and unapproved spend.

**10**

## Shipping, Delivery & Logistics Intelligence

Understands shipping receipts, delivery notes, packing lists, customs documents and proof of delivery to detect missing items, delays and discrepancies.

**11**

## Vendor & Supplier Management

Builds a full vendor file: contracts, invoices, payments, deliveries, documents, certificates, bank details, disputes and risk indicators.

**12**

## Client & Account Intelligence

Creates a consolidated client view across contracts, orders, invoices, payments, correspondence, complaints, renewals and commitments.

## OPERATIONAL DOMAIN 04

# Contracts & Obligations

Transform contracts, emails and operational documents into searchable clauses, responsibilities, deadlines and commitments.

14

## Contract Intelligence

Extracts parties, clauses, obligations, pricing, renewals, termination rights, amendments and operational commitments from contracts.

15

## Obligation & Deadline Management

Tracks obligations, deadlines, renewals, notices, permits, certificates and recurring responsibilities from any source document.

16

## Email & Correspondence Intelligence

Rebuilds threads, links attachments, identifies approvals, commitments, disputes and decisions, then connects them to contracts and operations.

## OPERATIONAL DOMAIN 05

# Legal & Compliance Intelligence

Deliver specialised multi-jurisdiction legal reasoning, compliance mapping, drafting and risk analysis with evidence behind every conclusion.

18

## Multi-Jurisdiction Legal Intelligence

Organises legal sources by jurisdiction, hierarchy, effective date and authority so legal analysis is grounded in the correct legal context.

19

## Legal Review & Risk Analysis

Reviews contracts, invoices, correspondence, vendor files and operational documents for legal risk, contradictions and missing evidence.

20

## Legal Drafting

Drafts contracts, notices, responses, policies, legal memos, board resolutions and dispute correspondence using approved language and cited sources.

21

## Compliance & Policy Management

Maps legal requirements to internal policies, controls, evidence, audit files, approvals, corrective actions and regulatory deadlines.

22

## Disputes, Investigations & Evidence

Builds chronologies, connects evidence, detects contradictions, maps claims and prepares matter files for disputes, audits and investigations.

**OPERATIONAL DOMAIN 06**

# Workflow, Security & Local AI Governance

Control how the platform operates: permissions, approval workflows, model administration, local infrastructure and auditability.

**23**

## Permissions & Confidentiality

Inherits source permissions, enforces access rules, protects privileged material, applies masking and records every sensitive action.

**24**

## Workflow & Approval Engine

Turns document findings into controlled workflows for approvals, invoice validation, contract review, vendor onboarding and compliance actions.

**25**

## Local AI Administration

Manages local models, OCR, embeddings, indexes, quality checks, evaluation sets, updates, backups and infrastructure monitoring.

**DELIVERY METHODOLOGY**

# From document chaos to controlled intelligence.

A structured implementation path for sensitive enterprise environments where accuracy, permissions and traceability matter from day one.

**01****Discovery**

Map the business model, document sources, departments, risks and operational questions Justitia must answer.

**02****Document Mapping**

Define source systems, document families, access rules, classifications, metadata and evidence requirements.

**03****Local Architecture**

Design the private infrastructure for storage paths, indexing, local models, OCR, security and audit logs.

**04****Build & Connect**

Configure modules, process representative documents, connect authorised sources and prepare workflows.

**05****Validate**

Test answer quality, citations, permissions, reconciliation logic, legal accuracy and operational outputs.

**06****Deploy & Evolve**

Launch with users, monitor performance, refine workflows and extend the system as the document estate grows.

**TAILOR-MADE LOCAL DEPLOYMENT**

# Build Justitia around your documents, risks and operations.

Ferrum Group designs Justitia as a private enterprise system. The final scope is shaped around your document universe, jurisdictions, existing tools, internal permissions and operational priorities.

**No generic deployment.**

Each Justitia implementation is configured and developed around the client's real document flows, approval rules, security requirements and business questions.

## Start the conversation

Book a focused consultation to define the right Justitia perimeter, required modules and local deployment roadmap.
